SUMMARY

MSc in Physics graduated cum laude with a thesis based on Python simulations of stochastic processes and parameter estimation from noisy measurements. Solid background in probability, statistics, numerical methods, ML. I have got two school years of experience teaching programming in Python and C++. Currently deepening ML skills through self-study. Looking for a quantitative role in data science, where I can grow into a strong practitioner.

WORK EXPERIENCE

09/2025 – 06/2026 — **High school teacher, Computer Science** — Lodi

IIS "A. Volta"

- While completing my Master degree I taught about number systems, algorithms, spreadsheets, and programming in C++ and Python.

10/2022 – 06/2023 — **High school teacher, Telecommunications and Automated Systems** — Piacenza

ISII "G. Marconi"

EDUCATION

12/2023 – 04/2026 — **University of Milan** — Milano

M.Sc. Physics, 110L/110, Quantum Information theory

- Completed thesis titled 'Entangling Unravellings for Quantum State Engineering and Quantum Metrology,'. I Investigated the entanglement of two distant qubits through continuous monitoring of their noise channels.
- Developed Python simulations using QuTiP, employing stochastic master equations and quantum trajectories.

10/2024 – 04/2025 — **Technical University of Munich (TUM)** — Munich

Erasmus+ exchange semester

- Undertook coursework in English, including 'Essential Machine Learning for Physicists' 30/30 and 'Quantum Information Theory'.

09/2019 – 12/2023 — **University of Milan** — Milano

B.Sc. Physics, 108/110

2013 – 2018 — **HIgh School - ISII "G. Marconi"** — Piacenza

Technical diploma, Electrical Engineering

SKILLS

Python (NumPy, pandas, Matplotlib, Jupyter)

C++

Machine learning

Probability and statistics

LANGUAGES

Italian (native)

English (C1)
